The graphs below show the velocity of a hypothetical object moving along a straight line. Choose the lettered graph or graphs that best represent each description. A graph may be used for more than one description or it may not be used at all. Some descriptions may correspond to more than one graph and some may not correspond to any graph at all. Be prepared to explain your choices.

a. The object is moving away from position 0 at a constant velocity
b. The object is moving toward position 0 at a constant velocity
c. The object’s velocity is increasing at a uniform rate
d. The object’s velocity is decreasing at a uniform rate
e. The object changes direction
f. The object is standing still for an extended period of time
g. The object is momentarily (and only momentarily) at rest on one occasion
h. The object is momentarily (and only momentarily) at rest on two separate occasions
